DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to an **apparatus** for non-destructive testing, classified in class 376, subclass 156.
 - II. Claims 9-19, drawn to a **process** of non-destructive testing using positron annihilation, classified in class 376, subclass 157.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus can be used in the identification of unknown element(s) in a material specimen.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

2. If invention I is elected, applicant is required under 35 U.S.C. 121 to elect a single disclosed species of the photon source for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

- A: Wherein the photon source is a radioactive isotope (see, for example, claim 8 and specification on page 15, paragraph 0037).
- B: Wherein the photon source comprise an electron accelerator and a target (see, for example claim 3 and specification on page 14, paragraph 0035).

3. If invention II is elected, applicant is required under 35 U.S.C. 121 to elect a single disclosed species of the activation/analysis process for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

- C: The process as shown in Fig. 3.
- D: The process as shown in Fig. 4.

4. If embodiment D is elected, applicant is further required to elect a single species for the arrangement of moving the specimen between activation and detection positions (see, for example, Fig. 5 and the specification on pages 25-27)

5. If invention II is elected, applicant is required under 35 U.S.C. 121 to elect a single disclosed species of the data processing algorithm for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

- E: Wherein Doppler broadening algorithm is applied (see, for example, specification on page 28, paragraph 0056).
- F: Wherein positron lifetime algorithm is applied (see, for example, specification on page 28, paragraph 0057).
- G: Wherein 3D imaging algorithm is applied (see, for example, specification on page 28, paragraph 0058).

6. Applicant is advised that a reply to the election requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
